 - Monitor weight weekly

Medical Management:

1. Vitamin D supplementation: Cholecalciferol 60,000 IU once weekly for 8 weeks, then monthly maintenance dose
2. Consider statin therapy if lipid levels do not improve with lifestyle modifications after 3 months
3. Blood pressure monitoring at home twice daily
4. No immediate pharmacological intervention for prediabetes; lifestyle modifications recommended

Follow-up Plan:

1. Repeat fasting blood sugar and HbA1c after 3 months
2. Repeat lipid profile after 3 months
3. Repeat Vitamin D levels after 3 months of supplementation
4. Blood pressure monitoring and documentation
5. Follow-up consultation with physician in 3 months
6. Consider referral to dietitian for personalized meal planning
7. Annual comprehensive health screening recommended

Additional Screening Recommended:

- Stress ECG/TMT if chest discomfort or exertional symptoms develop
- Retinal examination annually (diabetes screening)
- Urine microalbumin testing in 6 months
